- Ideal for small rooms.
- 3 operating speeds + sleep mode.

AIR Mini

Air purifier to go!

Breathe healthier air throughout the day, wherever you are.

Small but powerful

Weighing only 46 g, you can take it anywhere. Use it while working, cooking, or simply having fun with friends – this small and discreet protector is always on guard.

Simple & durable

No filters to replace or clean. Simply turn the device on and let it work for up to 180 hours with one charge. This personal air purifier comes with a USB Type-C charging cable and takes only 3 hours to fully charge.

Designed to protect

Tesla personal air purifier emits negative ions that clean the air around you by attaching to harmful particles and pulling them away to the ground, away from your face. It is ideal for people with allergies during the pollen season.

Modern & silent

Available in black, white, navy blue and orange, you can wear it on an adjustable strap around your neck, place it on a device holder on any available surface, or attach it using a visor clip. With no noisy fans or motors that could distract you, your personal protector will work silently and discretely.

Tesla AIR Purifiers

Breathe with ease

Small Domestic Appliances
