## Indulgence never looked so good

Tesla is proud to present its great selection of Android TVs, all with amazing performances – in any screen size you need. All of our models boast mesmerizing visuals, while some of them also have integrated soundbars or other useful functions. When it comes to your audiovisual experience - it's time for a whole new era.

## Your personal Google Assistant

A smart assistant is no longer reserved for your smartphone: now you can also ask the big screen whatever you want. Press the mic button on the remote, and use Google Assistant to find out traffic or weather information, Google anything, play and pause favorite movies or TV shows.

Turning the lights off!

## Can you feel the new groove?

We know how important audio component is to your watching experience, so you can hear every intense whisper, sitcom laugh or favorite song loud and clear. All Tesla TVs boast amazing sound quality, while some even have DTS support, surround effect and Bluetooth connection. Turn up the volume and let the fun take over!

## Expand the beauty

Chromecast allows you to watch your favorite TV shows, movies and other content on the largest screen, streaming it in a few clicks from other smart devices you use on a daily basis. This way, it is quite simple to control your TV from anywhere in the house!

## Comfy and cozy with Google Home integration

Most of Tesla Android TVs are compatible with the whole Google ecosystem, including Google Home. Control any smart home device using the built-in Google Assistant: turn on the lights, turn down the heating and much more.

## Mesmerizing visuals

Many Tesla TVs have a direct LED screen and an Ultra HD resolution, while some also boast support for HDR/HLG formats. We are always focused on providing you with a better user experience, vivid colors, faster application installing and quality image with no glitches or screen freezing.

## Technology develops, style remains

Utilize all the possibilities of your WiFi router in combination with your smart TV potential. If your Tesla TV comes with support for 5GHz WiFi networks, this could be the perfect time to enjoy 4K streaming, a more stable connection and much faster Internet.

## It's play time

Open the world of limitless fun with a preinstalled official Google Play Store and access to more than 5000 apps made for Android TV OS! Apart from Google Play Games, Google Play Movies & TV and Google Assistant, the licensed Android TV also supports official Android TV Netflix, HBO GO and Amazon Prime video apps.

# Google TV

At Tesla, we are constantly working on providing you with new entertainment options, innovative TV features and modern user interfaces. Google TV is the latest version of the official Android OS, launched by one of the greatest tech companies in the world: it allows you to browse content from across your favorite applications, offering a truly personalized experience by grouping movies and TV shows according to your interests.

## Created just for you

With Google TV, it's easier than ever to explore a whole world of enjoyment and discover new binge-worthy content! It's intelligently organized just for you: based on what you chose before, the program will help you discover what to watch next. You can also use voice command options to search for specific content across apps and services, or enjoy live TV if you feel like catching up with the world.

## Beyond TV features

Google TV also gives you the option to control your smart home devices (for example, dim the lights, check the backyard camera, etc.), as well as create kid-friendly, age-appropriate experiences for your little ones by setting filters and controlling app activities.

# VIDAA

VIDAA TV OS is designed to provide as smooth and intuitive watching experience as possible. Universal search feature allows you to look for content across apps: no more browsing through each app individually! Additional useful options include content recommendations, a voice assistant, art mode, a variety of hotel modes, and many other features. All you have to do is sit back and enjoy favorite content at your fingertips!

# webOS

webOS is an intelligent TV operating system created to provide a great audio-visual experience while supporting TV broadcasting systems on the global market. It supports Dolby audio, HDR, HLG, as well as world's top content apps. With a function called "Home dashboard", you can easily manage all inputs, settings and connected devices.

## Limitless options

Multitasking? Not a problem with Tesla TV, as it provides you with a possibility to split the screen so you can watch TV (or play games using a console or a PC connected by HDMI) and browse the Internet at the same time! Easily create shortcuts, move the apps around and access any settings, as well as change size, letters or the very position of subtitles.

## AI voice recognition system

The built-in ThinQ AI voice recognition system supports more than 13 different languages. From search options to menu functions, you can control the TV, look for any information, play music or browse through movies and TV shows just by speaking to the remote.

## Let the music play

Tesla webOS TV will wow you with the amazing sound, but the Music player app elevates the experience of listening to favorite melodies to a whole other level. It allows you to play music even when the TV screen is off!

## Connectivity matters

Connect the TV with your computer or phone wirelessly (Miracast, DLNA) to browse through it on the big screen, as well as manage the device using the TV remote. There's an important game scheduled, but the kids are asleep? You have two options: use your Bluetooth headphones, or use ThinQ app to control the TV, transfer the sound to smartphone headphones and turn the volume up!
